INSPECTION AND REPAIR

Slings should be examined throughout their length for abrasions, cuts, heat damage, fitting distortion or damage, and tag legibility. Abrasion, heat damage, or cuts to the cover may indicate a loss of strength to the load cores. If any doubts are held by the inspector, sling should be removed from service and sent to M&W for evaluation and possible repair. Slings removed from service shall be destroyed and rendered completely unfit for future use. Inspector and sling user shall follow all applicable OSHA 1910.184 and ASME B30.9-6 regulations regarding sling use and inspection.
